SecondFragment?I say SecondFragment: public SecondFragment extends Fragment { @Nullable @Override public View onCreateView(LayoutInflater inflater, @Nullable ViewGroup container, @Nullable Bundle savedInstanceState) { return inflater.inflate(R.layout.fragment_second, container, false); } } (c). You can't attest this by looking at the gif demo above. It adheres to the guidelines of the lower navigation bar of Google's Material Design. It allows you not to select your 2 and guide mode. You can't assign each tab a separate color. You can't render badges on the tabs. { return inflater.inflate(R.layout.fragment_2, container, false); } (c). You can't use this library with ViewPager: it also doesn't support badges. This library also supports centering a floating action bot on the bottom navigation bar. Install: Install To install this library, your build version of sdk must be 25 and higher: compileSdkVersion >= 25 Go to your build.gradle root level and add the following: allprojects { repositories { ... MainActivity The activity that will host all these fragments: public class MainActivity extends AppCompatActivity { private Fragment fragment; private fragmentManager; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); fragmentManager = getSupportFragmentManager(); fragment = new FavoriteFragment(); fragmentManager.beginTransaction().add(R.id.main_container, fragment).commit(); BottomNavigationView bottomNavigationView = (BottomNavigationView) findViewById(R.id.bottom_navigation); bottomNavigationView.setOnNavigationItemSelectedListener { @Override boolean public onNavigationItemSelectedListener(Menu Item) { switch (item.getItemId()) { case R.id.action_favorites: fragment = new Pause; case R.id.action_video: fragment = new new break; case R.id.action_music: fragment = new MusicFragment(); break; } final FragmentTransaction transaction = fragmentManager.beginTransaction(); transaction.replace(R.id.main_container, fragment).commit(); return true; } } } } Run If you run the project you will get the following: Download Follow Project Author The difference with the first example is shown in the below image: Lets go. It only works if you set white color for background android:background="@android:color/white" Note that ripple effect will disappear if you use app:itemBackground property. Handling enabled/disabled state: You need to create selector file:
