SUMMARY Oral health-related quality of life (OHRQoL) is an important aspect of dental care. A comprehensive assessment should be made using validated instruments. The psychosocial impact of dental aesthetics questionnaire (PIDAQ) is an OHRQoL instrument that assesses the psychosocial impact of dental aesthetics. It was developed and validated for use on young adults.

The aim of the present study was to assess the reliability, validity, and applicability of the PIDAQ for young adults in Brazil. After translation and cross-cultural adaptation, the questionnaire was
